

High quality wine production

This is one of the main goals that a winemaker aim and to achieve this we need to keep MOG's (Material Other than Grapes) outside the vinification tanks.

For this, Enoveneta have studied a new grape selection technologies. Grapesort is an horizontal table with rollers for the selection of destemmed grapes that allows to send clean grape berries to the next working phases without green parts such as stalks or leaves, wich will compromise the product quality.

Grapesort is completely built in AISI 304 stainless steel and is height adjustable. You can change the rollers distance and on outlet side there are a stainless steel conveyor. A control panel with inverter is included.
